

Clifton

NURSERIES

SCHEFFLERA

Originates on both sides of the Atlantic. It is known as the Octopus Tree because of its spectacular tentacle-like flowers. Unfortunately, it does not bloom under room conditions and the indoor plant form is known as the Umbrella plant, which refers to the finger-like glossy leaflets radiating like umbrella spokes from each leaf stalk.

LIGHT

Bright light, away from direct sunlight.

WATER

Water liberally from spring to autumn, sparingly in the winter. Mist leaves frequently.

TEMPERATURE

Average warmth; not less than 13°C (55°F).

REPOT

Repot every 2 years in the spring.

PROPAGATION

Difficult. Stem cuttings in summer; use Bio Roota and bottom heat. Alternatively sow fresh seeds in the spring.
